EXPAK XL

Our Nefab ExPak XL, patent pending, is designed for giant volumes of up to 20 m3 or 700 ft3. Quick and easy to assemble and dismantle – without a single nail – it enhances safety, creates a quieter working environment, and offers effective packaging of extra large products.

Expendable

Features

Nefab ExPak XL is made of high-quality birch or pine plywood, 8-12 mm thick depending on the application. It is a packaging held together with clamps which are mounted without tools in the pre-cut grooves. The panels can be mounted horizontally onto the base profile or be angled inwards up 60°, reducing the need for a lot of space when packaging goods. The ExPak XL is delivered collapsed and is IPPC certified.

No nails

Benefits

- Quick to assemble and dismantle
- Nail-less which makes for higher safety and a quieter working environment
- Space-saving as it is delivered and stored as a flatpack
- Optimized outer dimensions to make the most of vehicle capacity in transport
- Low transport weight and volume is better for the environment than traditional solutions

Easy setup
