

EXPAK VS WOOD CRATES

Nefab ExPak is an exclusive line of nail-less, collapsible plywood boxes ranging from our smaller, three-piece style to a larger, six-piece configuration. Our ExPak boxes are made with 6 mm plywood and galvanized steel. This creates an extremely strong, yet lightweight packaging solution.

ExPak compared to traditional wooden crates

Compared to traditional wooden crates, the ExPak boxes can be assembled and dismantled without using a single nail. This does not only create a safer working environment, the handling and packing time is also reduced compared to traditional crates. Our ExPak boxes are tested and approved according to several international standards, including ISPM 15 export regulation for wood products. ExPak is suitable for both export and domestic shipments.

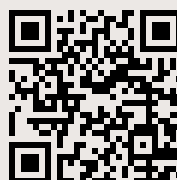

ExPak features

- Quick to assemble and dismantle with no nails
- 35-40% smaller in volume
- Received and stored flat, saving warehouse space
- Stronger than traditional cleated plywood boxes
- Creates a safer and quieter working environment
- 10-15% lighter in weight
- Completely customizable for any application
- Can be printed with your company logo

ExPak allows big savings compared with traditional plywood crates

- TRANSPORT**
ExPak is delivered to you flat, saving inbound transport cost. The smaller outer dimensions of the assembled ExPak reduces shipping volume, saving transport costs for shipping your outbound products as well.
- WAREHOUSING**
ExPak takes up 50% less storage space than cleated crates.
- PRODUCT PROTECTION**
ExPak can reduce your cost and risk of damage.
- HANDLING**
ExPak is faster to assemble and open, saving you on packing and unpacking time.
- ENVIRONMENT**
Due to ExPak's lighter weight and smaller volume, you have less material to dispose of which reduces your disposal costs and your impact to the environment.
