

Reference case

ASCOFORGE

Pooling system for outbound flows

The Ascoforge reference case

Ascoforge Safe is a subsidiary of the Lucchini Group, a European leader in long steel product manufacturing. Ascoforge has a wide product range and delivers mainly to the Automotive market.

The French plant has customers all over Europe, and ships heavy forged products to machinists. With a very high frequency of deliveries, the logistic department was looking for a reusable packaging solution.

The Nefab Logistics pooling system

Having more than 200 users registered in our database and delivering in 14 countries, Nefab Logistics recommended the Nefab pooling system.

The packaging material is of standard Euro size and fits well with the Ascoforge expectations in terms of resistance and stacking capability.

The important weight of the goods can be a problem for the receiver. The collars principle gives flexibility and offers possibility to adapt the weight of the total consignment to the capacity of the receiver.

The benefits for the users

By using the Nefab pooling system, Ascoforge has turned a fix cost into a flexible cost, as the fee is based on daily utilisation. In addition to this the receivers don't have packaging waste problem anymore and can easily stack the filled packaging.

Nefab manages the return freight and provides a monthly activity report.
