

ASSEMBLY INSTRUCTIONS

NEFAB EXPAK S

Nefab ExPak S is assembled in minutes. It is delivered in six separate components (lid, two sides, two ends, and bottom).

Step 1: Start by placing one of the sides inside the bottom metal profile, placing the tabs through the tab slots.

Step 2: Slide in the first end panel, placing the bottom end corner tabs through the tab slots.

Step 3: Attach the second end panel using the same method as the first one.

Step 4: After inserting the last side panel, place the lid over the top with the tabs in the lid slots. To bend the tabs, place the end of a screwdriver in the hole in each tab and bend the tab 180 degrees. The top tabs should be bent down towards the floor. The bottom tabs should be bent upwards towards the sky. The tabs in the corners along the height should be bent back over the open edge of the slot.
